## » CAPABILITIES

- **Easily Meet VMware Requirements** – Encrypting data stored on VxRail (vSAN) requires a highly available Key Management System (KMS). VaultCore for VMware provides a lite and seamless solution.
- **Establish Root of Trust** – VaultCore is a certified hardware root of trust for Dell VxRail and VMware Cloud Foundations.
- **Built-In Security Features** – TPM, secure boot, system lockdown, FIPS encryption and tamper-evident chassis.
- **Trusted Provenance** – Only hardware solution that is made in the United States with secure supply chain protection.
- **Scale for Entire Enterprise** – Option to easily scale capacity to protect entire network from datacenter, to the edge (OT and IOT), and to multiple clouds while integrating with management tools like iDRAC and vRealize.

## » USE CASE

- **Easily Meet VMware Requirements** – Encrypting data stored on VxRail (vSAN) requires a highly available Key Management System (KMS). VaultCore for VMware provides a lite and seamless solution.
